JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

On January 26 the British steamship *Candia*, with 105 crew, was granted a consular bill of health for Cebu.

Week ended February 2, 1907. No quarantinable diseases reported for the city of Manila.

Smallpox on vessel.—A case of smallpox was detected at the quarantine inspection at Manila of the steamship *Pioneer* on January 29, 1907. The vessel, with all on board, was remanded to Mariveles Quarantine Station. The persons on board were vaccinated and their clothing and effects disinfected with steam. The vessel, with the exception of the cargo holds, which had not been opened, was disinfected with bichloride solution. The case of smallpox originated in the island of Marinduque, which is one of the provinces which have not as yet been systematically vaccinated.

This is the time of the year in which the dry season occurs, and smallpox has always been more prevalent in the past during this period.

During the week vessels were granted consular bills of health as follows:

On January 28 the British steamship *Wray Castle*, with 43 crew, en route from Kobe to Boston and New York via Cebu, was granted a supplemental bill of health. Personnel inspected and cargo manifests viséed.

On January 30 the U. S. army transport *Dix*, with 149 crew, was granted a bill of health for Seattle. Crew were inspected on board at the hour of sailing. Cargo inspected and either disinfected or passed and labeled accordingly.

PORTO RICO.
